FCA US LLC Expands Partnership With Waymo

- Up to 62,000 additional Chrysler Pacifica Hybrid minivans will join Waymo's driverless fleet, starting in late 2018
- Companies beginning discussions about use of Waymo self-driving technology, including potentially through licensing, in a FCA-manufactured vehicle available to retail customers

May 31, 2018, Auburn Hills, Mich. - FCA US LLC and Waymo today announced they will expand their partnership with an agreement to add up to 62,000 [Chrysler Pacifica Hybrid](#) minivans to Waymo's self-driving fleet. This venture builds upon a [previous commitment](#), announced in January, to deliver thousands of vehicles to Waymo's driverless transportation service. Vehicle delivery is expected to begin in late 2018.

FCA US and Waymo also announced today that they are beginning discussions about the use of Waymo self-driving technology, including potentially through licensing, in a FCA-manufactured vehicle available to retail customers.

"FCA is committed to bringing self-driving technology to our customers in a manner that is safe, efficient and realistic," said Sergio Marchionne, Chief Executive Officer, Fiat Chrysler Automobiles N.V. "Strategic partnerships, such as the one we have with Waymo, will help to drive innovative technology to the forefront."

Currently, Waymo is the only company with a fleet of fully self-driving cars, with no one in the driver seat, on public roads. Later this year, Waymo will launch the world's first self-driving transportation service, allowing the public to use Waymo's app to request a vehicle.

"Waymo's goal from day one has been to build the world's most experienced driver and give people access to self-driving technology that will make our roads safer," said John Krafcik, CEO of Waymo. "We're excited to deepen our relationship with FCA that will support the launch of our driverless service, and explore future products that support Waymo's mission."

FCA and Waymo first announced their partnership in May 2016. The [first-of-its-kind collaboration](#) brought engineers from FCA and Waymo together to integrate Waymo's fully self-driving system into the Chrysler Pacifica Hybrid minivan, leveraging each company's individual strengths and resources. Since then, FCA and Waymo engineers have continued working together to support Waymo's expansion and to evolve the Chrysler Pacifica Hybrid minivan with self-driving technology.

The self-driving Chrysler Pacifica Hybrid minivans are one of the most advanced vehicles on the road today, equipped with Waymo's self-driving system, including a powerful hardware suite and software honed over 6 million miles of on-road testing.

To date, FCA has delivered 600 Pacifica Hybrid minivans to Waymo.

About Waymo

Waymo is a self-driving technology company with a mission to make it safe and easy for people and things to move around. We're determined to improve transportation for people around the world, building on software and sensor technology developed in Google's labs since 2009. Waymo is building the most experienced driver with over 6 million miles driven on public roads across 25 U.S. cities, and billions of miles logged in simulation testing.
